

1 the things we have here.

2 If -- assuming the entrance is 45 degrees  
3 then, what would you expect, where would you expect  
4 the back spatter then to go?

5 A. If -- I would expect to see back spatter.  
6 It would depend upon if you're talking about a bloody  
7 sponge, I would expect to see blood spatter go up and  
8 back toward the gun.

9 Q. Two primary directions?

10 A. Yes, I would expect to see a spray come out  
11 this way (indicating).

12 Q. Would you expect that spray -- would you  
13 expect the spray on both directions to go  
14 approximately the same distance?

15 A. Yes.

16 Q. So we get a good idea how that might change  
17 if it would at all, let me ask you this, let's assume  
18 the firing degree angle -- this may not be exactly  
19 right, but let's assume that for now -- let's assume  
20 now we start to make less -- we still have an angle so  
21 we're not going straight but more of an angle here  
22 than entered the body?

23 A. Uh-huh.

24 Q. Now would you tell me how you expect --  
25 would you expect one direction of blood spatter or two
